**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 4, and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Hwang (5,666,160).

For claim 1, Hwang discloses a digital zoom apparatus for forming a zoomed out image from a plurality of received image signals in accordance with a given magnification, the apparatus comprising: an image signal storage unit which stores a plurality of frame or field image signals (Abstract); and a record and control unit which zooms out the received frame or field image signals in accordance with a given magnification, receives motion information from said motion information detector, controls the location in said image signal storage where the zoomed out image signals are to be recorded, and records zoomed out image signals in said image signals storage unit, wherein the plurality of received frame or field images are zoomed out and combined to form the zoomed out image (Column 3, Line 29 through Column 4, Line 4), which is synthesized according to a degree of overlap between the received images (Column 3, Line 60 through Column 4, Line 5; Note: The recorded images are overlapped due to the applied motion correction. Column 3, Lines 38-42).

For claim 4, Hwang discloses all the previous limitations, wherein said motion information detector compares a previously received image signal with a currently received image signal to detect said motion information (Column 6, Lines 32-34).

For claim 5, Hwang discloses the storage in the image signal storage unit of only those portions of received images needed to form the zoomed out image, whereby storage space is conserved by elimination of redundant information. The redundant information in the unselected area of each subsequent input image is eliminated by using only the portion of images that are within the zoom area (Column 3, Lines 33-37; Column 6, Lines 65-67).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hwang (US 5,666,160) in view of Hale (US 5,412,421).

For claims 2 and 3, Hwang discloses all the previous limitations. Hwang includes a motion detector which detects movement. An accelerometer or gyroscope is a motion detector. However, Hwang does not explicitly teach accelerometer or gyroscopic sensor to detect and provide motion information data, even though one of ordinary skill in the art would know that accelerometers and gyroscopes are motion detectors.

Nevertheless, Hale teaches a motion compensated sensor that contains a motion detector that includes a gyroscope and an accelerometer (Column 3, Lines 15-19). Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to configure Hale's motion detector, which includes an accelerometer and gyroscope in Hwang's digital zooming apparatus in order to determine movement of the sensor.

*Conclusion*

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary L Solomon whose telephone number is (703)-305-4370. The examiner can normally be reached on Monday - Friday 8:00 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christensen, B Andrew can be reached on (703)-308-9644.

**Any response to this action should be mailed to:**

Commissioner of Patents and Trademarks  
Washington, D.C. 20231

**Or faxed to:**

**(703) 872-9314**, (for informal or draft communications, please label  
"Proposed" or "Draft")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application should be directed to the customer service number **(703) 306-0377**.
